## **DETAILED ACTION**

### ***Information Disclosure Statement***

The information disclosure statement (IDS) submitted on 12/14/04 has been considered. It is noted, however, that documents 5,183,155 and 2003/006819 have not been considered that these document numbers do not match the inventor's name.

### ***Abstract***

The abstract of the disclosure is objected to because phrases which can be implied, such as "of the present invention" should not be present therein. Correction is required. See MPEP § 608.01(b).

### ***Drawings***

It is noted that this application was not filed with any drawings. For the purposes of examination, the drawings in document WO 2004/000575 (which co-inside with the specification of the instant application) were used. A new set of drawings for this application should be submitted. It is noted that if a copy of the drawings referenced above are used for this application, Figures 1A and 1B should be labeled "Prior Art".

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 3751

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 9 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Kaufmann '155 (hereinafter Kaufmann). In regard to claim 1, Kaufmann discloses a writing instrument comprised of an ink storage chamber 7 (see Figure 1), a writing element 12, a reservoir chamber 16 positioned between the storage chamber and the writing element which communicates with the atmosphere (via vent 14), a partition wall 4 that divides the storage chamber and reservoir chamber and includes a through hole 18 through a central portion thereof and an elongated ink supply member which extends through the through hole such that a gap 22 (see Figure 3) is formed between the inner wall of the through hole and the outer surface of the supply member wherein the inner wall of the through hole has two or more contact portions (adjacent gaps 22) which contact the outer circumference of the supply member. In regard to claim 9, the reservoir chamber includes an ink holding member 16 which is capable of being impregnated with ink. In regard to claim 10, the contact portions formed on the inner wall of the through hole define ribs which contact the supply member.

### ***Allowable Subject Matter***

Claims 2-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
